(54) METHOD FOR REGISTERING EXCEPTIONAL CHARACTER FONT

(57)Abstract:

PROBLEM TO BE SOLVED: To use exceptional characters created by a user uniquely in the Windows environment over the entire network.

SOLUTION: The character code of an exceptional character created by a user uniquely on a personal computer in the Windows environment is converted into a shift JIS code being used in a printer. The font of exceptional characters thus converted is then divided in units of sectional point code and a file name is imparted to each unit section thus divided. An identifier indicative of a converted font format is affixed, as a header, to the head of each file name and a file for describing the divided tiles collectively is formed. Subsequently, a file name required for the printer to recognize the file thus formed as a printer style name is defined and reconfigured into tree structure. The file of exceptional characters reconfigured into tree structure is then copied from the personal computer to the printer.

LEGAL STATUS

[Date of request for examination]

16.04.2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
